XXII CONVEGNO NAZIONALE DELL'ASSOCIAZIONE ITALIANA DI SCIENZA E TECNOLOGIA DELLE MACROMOLECOLE; GRAND HOTEL SAVOIA - VIA ARSENALE DI TERRA, 5 GENOVA, 11-14 SETTEMBRE 2016

Transire mare. Con questo titolo il 2° Convegno nazionale di Cultura navale e marittima - CNM2 di Genova ha affrontato, nel 2016, il complesso rapporto tra l'uomo ed il mare nelle sue diverse connotazioni e sfumature. Il mare come confine geografico e legame, come limite da superare e come ambiente con cui confrontarsi per crescere. Questo è il tema conduttore di una serie di saggi di alto profilo che, presentati durante due giornate di convegno molto denso, sono stati raccolti grazie all'impegno di un nutrito gruppo di specialisti del settore. Questo volume, che non è un semplice resoconto, offre nei diversi settori in cui si articola uno spaccato delle più recenti ricerche, con l'intento di fornire ai lettori strumenti utili per la comprensione e l'approfondimento delle diverse sfaccettature di cui si compone il millenario rapporto tra l'uomo e il mare.

Technology is taking on an increasingly central and determining role in society, and can provide contradictory results: wealth on the one hand, but also unemployment, environmental imbalances and other social problems on the other. Manufacturing techniques and production organization are chosen in every country based mainly on the specific needs of the companies, while the real needs of each population are often quite different. Already, in order to prevent all forms of technology from becoming increasingly "invasive", towards both the natural supply of resources and the specific - though highly differentiated - needs of humanity, technological paths must be identified and followed which are capable of making the various needs compatible, from the standpoint of sustainable development, the conservation and increase in value of natural resources, and the quality of development. This will become increasingly important in the future. This goal is undoubtedly ambitious and difficult to achieve; however, evidence of the problems caused by generalized, uncontrolled use of technology, all over the world, leads us to believe that intense efforts must be made to achieve this aim. If not, humankind runs the risk of an irreversible degradation of the most important aspects of economic development and its quality. Within this framework, those companies that produce goods and services obviously occupy a central, active role, which they must play with a view both to competitiveness and overall qualification and to contributing to the objectives of sustainable development.

This book reinvestigates and analyses, in various aspects and details, the scientific basis of an up-to-date 'nuclear culture' and presents the basic and outstanding problems of this field, with its important technical and social applications and consequences. The contributions are presented by leading experts in this area and the fundamental approaches related to nuclear fission and fusion have been considered and covered. In the light of public opinion regarding nuclear energy as a whole, after the Chernobyl accident, the various items, including safety and ecological problems, are treated beyond the political and social misunderstandings due to ideological and fashionable interferences. The resulting collection of papers therefore satisfy the double need of maintaining a high scientific standard and of presenting the data and the facts in such a way that they can be understood, in their essential aspects, by a more general audience.
